Labour Market Monitor 2023

An EU-Wide Labour Market Monitoring System Updated
Annually

Executive Summary: EU in a Nutshell

Ulrike Huemer, Helmut Mahringer

September 2024

Austrian Institute of Economic Research
Commissioned by Vienna Chamber of Labour

Internal review: Julia Bock-Schappelwein
Research assistance: Marion Kogler

The report is an update of a set of labour market indices first developed and tested in 2010 in collaboration with experts of the Vienna Chamber of Labour (AK). The key labour market dimensions considered are: overall labour market performance, participation of different groups of people, exclusion risks on the labour market, distribution of earnings and redistribution by the welfare state. The present update summarises the results of the monitoring system, based on data predominantly from 2022. It thus provides a descriptive insight into the different ways in which EU countries have been affected by the COVID-19 pandemic. Among the EU member countries, Denmark performs best, with a position in the top field in all five dimensions. The Netherlands, Slovenia and Luxembourg are among the top performers or at least in the upper middle field in all five dimensions. Bulgaria, Greece, Latvia, Portugal, Romania, and Slovakia are in the lower middle field or in the bottom field in all five dimensions.

Introduction

The assessment of the labour market situation in the member states of the European Union is often carried out by Eurostat based on a few regularly updated key indicators. In particular, much emphasis is placed on the unemployment rate in public and political debate. However, focusing on a single indicator only captures one certain aspect of the labour market. Against this background, the Vienna Chamber of Labour (AK) aims to examine a wider range of labour market issues in a European context. In 2010, in collaboration with WIFO, a team of experts from AK (Austrian Federal Chamber of Labour) and ETUI (European Trade Union Institute) identified five key labour market dimensions:

1. Overall labour market performance
2. Participation
3. Exclusion risks on the labour market
4. Distribution of earnings
5. Redistribution by the welfare state

Based on a series of indicators, an area index was created for each of these five dimensions and applied to the EU 27 countries¹⁾. The Labour Market Monitor therefore consists of five separate dimensions. Each index can have a value between 1 and 10 for the countries considered, with 1 representing the worst and 10 the best possible outcome. On the basis of the calculated index points, four country groups are formed along the quartile limits ("top field", "upper middle field", "lower middle field" and "bottom field").

Indicators that are comparable and regularly available across Europe are used. This facilitates regular updates of these five indices and allows for monitoring over time. The present edition represents the 13th update of the Labour Market Monitor.

The advantage of this set of instruments lies in

- the bundling of complex economic, political, and social contexts into a few index values,
- the comparison of national conditions, which can also be used for benchmarking,
- regular and fast updates and
- the creation of a descriptive overview that can serve as a starting point for more in-depth analysis.

The Labour Market Monitor is intended to be a monitoring system that condenses important aspects of labour market developments from a multitude of indicators. However, the generation of indices is also a tightrope walk. On the one hand, indices reduce the complexity of the information processed; on the other hand, this reduction carries the risk of misinterpretation –

¹⁾ All countries for which data is available for all indicators are included in the respective index. Since 2021, the Labour Market Monitor no longer includes the United Kingdom.

we aim to counteract this by a transparent methodology and documentation of data and methods as well as by the presenting the five dimensions of the labour market separately.

The present report summarises the current results²⁾ of the five dimensions of the Labour Market Monitor: It provides a (carto-)graphic overview and presents the main characteristics of the top countries in the five key labour market dimensions defined. In addition, this report outlines the long-term development (since 2008) of labour market performance in the cyclical dimension of the Labour Market Monitor (Dimension 1 "Overall Labour Market Performance"). It examines how the labour market is affected by economic crises and its ability to recover after economic crises.

²⁾ Huemer, U., & Mahringer, H. (2024). *Arbeitsmarktmonitor 2023. Update des jährlichen, EU-weiten Arbeitsmarktbeobachtungssystems*. WIFO (forthcoming).

Labour market monitoring with the Labour Market Monitor

A total of 58 indicators³⁾ are represented in the Labour Market Monitor and its five dimensions. The selection of indicators was based on content considerations as well as aspects of regular availability and comparability of data. The Labour Market Monitor is mainly based on data from Eurostat (EU-LFS and EU-SILC) and always uses the most recent data – in the case of the Labour Market Monitor 2023 this was mainly data from the years 2022 and 2021⁴⁾.

The five dimensions

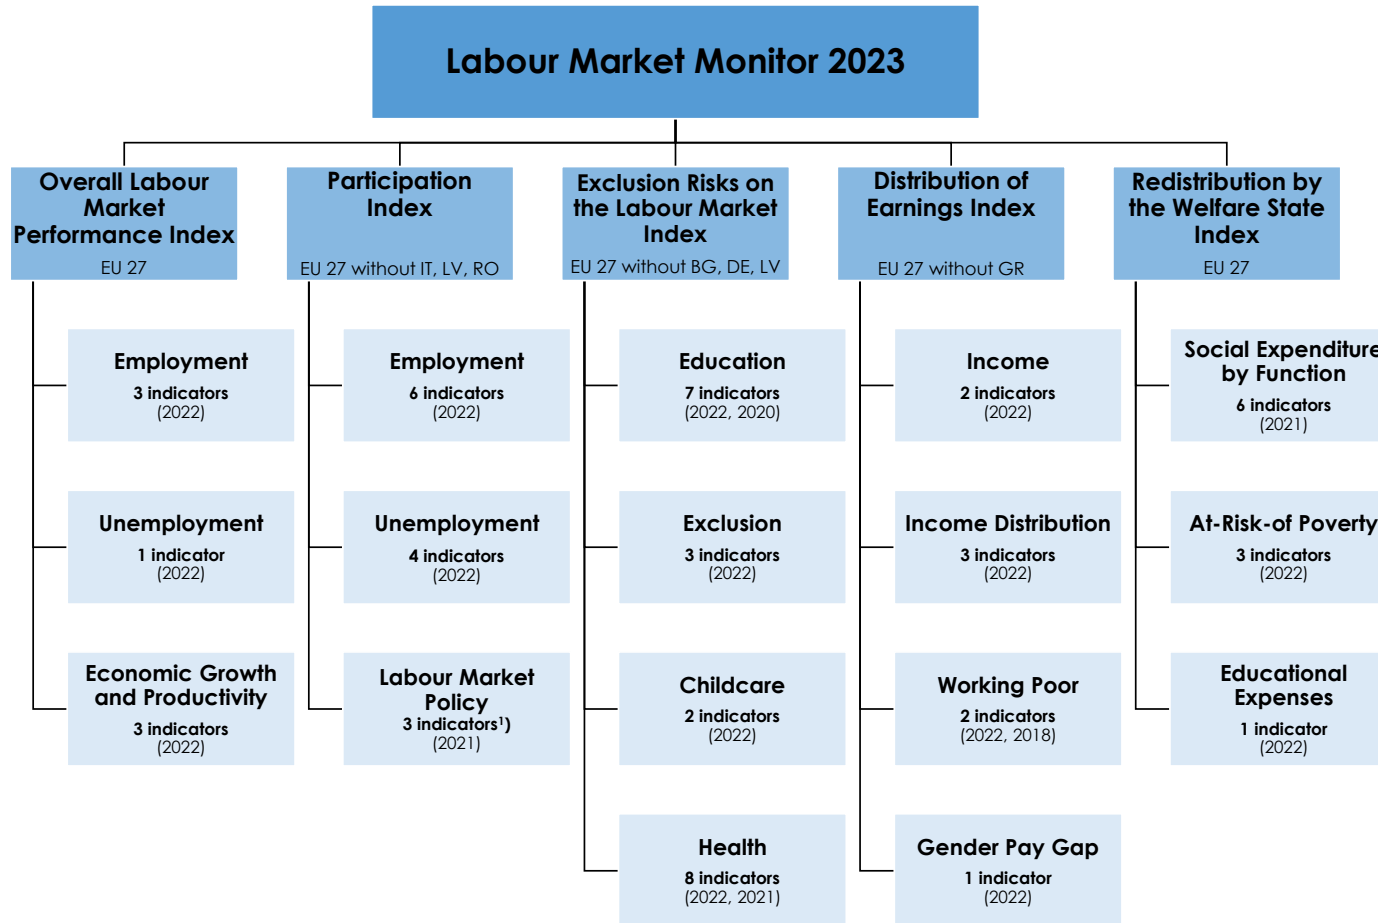

- **Dimension (1)**, "Overall Labour Market Performance", refers to the labour market in the context of the overall economic situation of a country based on the interplay between employment, unemployment, economic growth, and productivity (seven indicators). Like Dimension 2, Dimension 1 reflects general aspects of the labour market.
- **Dimension (2)**, "Participation", captures the extent to which different groups of people (e. g. young and old persons, women, and men) are integrated into the labour market and is measured by 13 indicators (in this year's update: twelve indicators)⁵⁾.
- **Dimension (3)**, "Exclusion Risks on the Labour Market", is intended to capture the capacity of a country to provide fair access to the labour market and the chances of remaining employed. The level of education and the availability of childcare infrastructure undoubtedly play an important role here, with 20 indicators being used in this area.
- **Dimension (4)** shows the "Distribution of Earnings" based on eight indicators.
- **Dimension (5)**, "Redistribution by the Welfare State", uses ten indicators to measure the effectiveness of state interventions and public expenditures on social protection and education.

³⁾ Only 57 indicators were included in the Labour Market Monitor 2023. This is because short-time work is recorded differently in different countries – partly as an active labour market policy (ALMP) intervention, partly as a passive labour market policy intervention. Therefore, the indicator on ALMP expenditure in Dimension 2 was extended to include passive expenditure on short-time work. This adjustment to increase comparability is not possible for the indicator on participation in ALMP, which is why this indicator was excluded.

⁴⁾ However, not all indicators are available as quickly and completely as others. If the most recent data for a country was missing, data from the previous year was used. If this information was also missing, the country was not included in the calculation.

⁵⁾ Indicator 13 "Participants in Active Labour Market Policy (ALMP) measures as a percentage of the labour force" was excluded from the Labour Market Monitor 2023. For further details see footnote 3.

Structure of the Labour Market Monitor 2023: dimensions and subdimensions

S: WIFO. – 1) In this year's update, two indicators (instead of the three) are included in the "Labour Market Policy" subdimension of Dimension 2 "Participation". This is because short-time work (as an active or passive labour market policy measure) is recorded differently in different countries. To ensure comparability, short-time work expenditures were added to the expenditures for active labour market policy (if recorded as a passive measure); however, it is not possible to adapt the indicator active labour market policy participants, which is why this indicator was not included.

Index methodology

The calculation of the five dimensions is based on standard methods of index construction (see Haas et al. 2010, p. 15ff)⁶⁾. This involves a multi-step process. In a first step, the indicators, which are in part measured in different units (e. g. euros, percentages) are normalised by using the min-max method. In a second step, the standardised indicators are transformed to a scale from 1 (worst value) to 10 (best value). In a third step, the indicators are weighted on the basis of their standard deviation to ensure that indicators with a higher variation are not represented disproportionately higher or exert a higher influence on the overall index. In a fourth step, the values obtained for each index in steps 1 to 3 are added together and once again normalised and transformed. This way, the different indicators per country and dimension of the Labour Market Monitor are aggregated to an area index figure (index point value).

Multi-step calculation process of the five indices including sensitivity analysis

S: WIFO.

Finally, a sensitivity analysis is applied to test the robustness of our results and compare the performance of the index with alternative configurations (changing the weighting of the indicators or the composition of indicators per index). The model proves highly robust with respect to the different variations in weighting and selection of indicators.

Presentation of results

On the basis of the calculated index point values, four country groups are formed along the quartile limits ("top field", "upper middle field", "lower middle field", and "bottom field"). These country groups are used to make a comparison to the previous year. It is not the changes in the rankings that are assessed, but rather the categorisation of the countries into the four groups of the distribution. However, in forming four equally occupied country groups, the distance in index point values between neighbouring groups can be quite small. For this reason, an additional alternative group categorisation is carried out: countries are clustered in such a way that the distance between the countries' index point values within each group is minimised, while at the same time the distance to the neighbouring groups is maximised (index point value distance of at least 0.5 on the ten-part scale). No prior-year comparison is made for this alternative group categorisation.

When interpreting the indices, it should be noted that despite a comprehensive selection of figures, an index can never fully capture all national differences and country-specific institutional contexts.

⁶⁾ Haas, S., Lutz, H., Mahringer, H., & Rückert, E. (2010). *Implementierung und Testung des 'Arbeitsmarktmonitors der Arbeiterkammer Wien'*. WIFO. <https://www.wifo.ac.at/www/pubid/43103>.

Results at a glance

Rankings based on country groups formed along the quartile limits

Dimension 1 to 5, EU 27

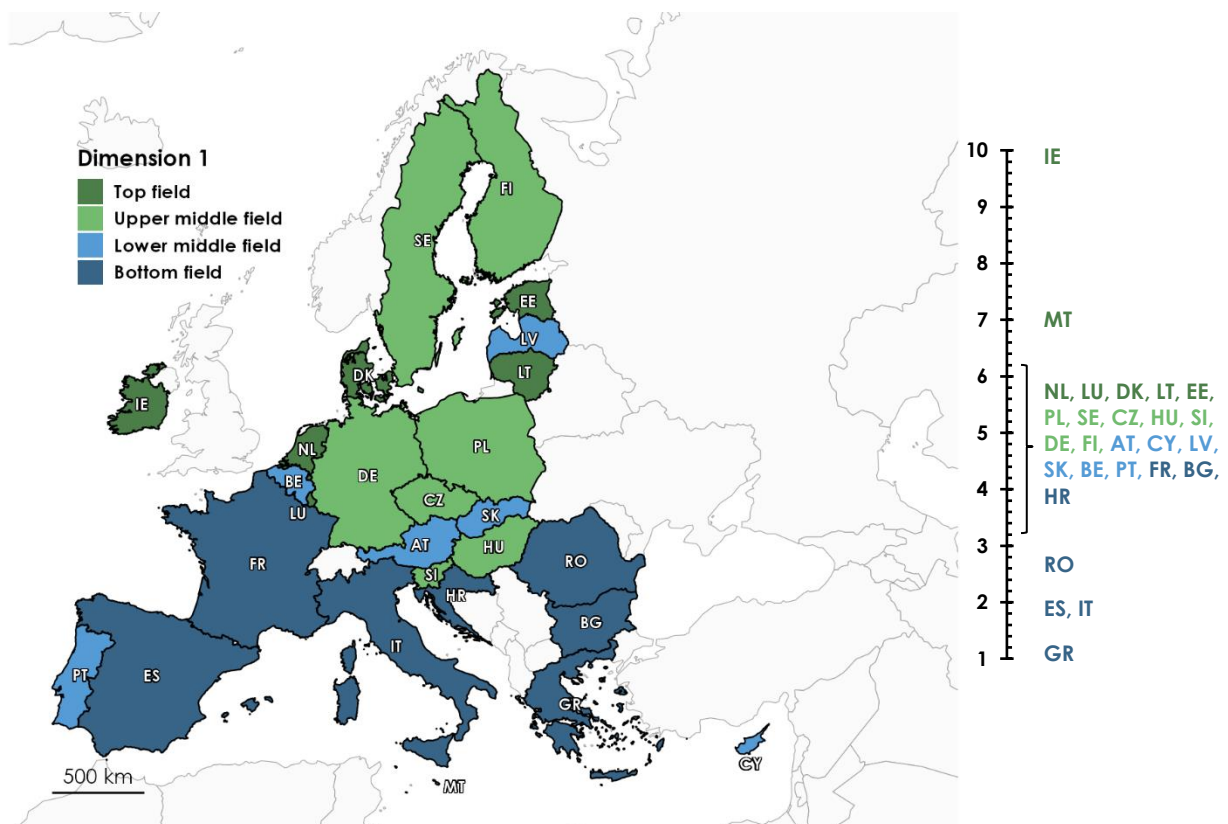

S: Labour Market Monitor 2023. – D ... Dimension. n.a. ... not available.

- In a European comparison, Denmark is the only EU country among the top performers in all five dimensions.
- Luxembourg, the Netherlands and Slovenia are among the top performers or at least in the upper middle field in all five dimensions.
- Southern European countries and Central and Eastern European countries are often found in the bottom field of the rankings.
- Bulgaria, Greece, Spain, Latvia, Portugal, Romania and Slovakia are at the bottom or in the lower middle field in all five dimensions.

Dimension 1 "Overall Labour Market Performance"

Dimension 1 includes seven indicators that represent the labour market performance of a country in the overall economic context: the level of employment of the working-age population (employment rate, employment rate in full-time equivalents) and employment growth compared to the previous year, the current level of unemployment (unemployment rate) and the economic performance of a country (economic growth and productivity: real GDP per capita – absolute value in euro and development over time – as well as labour productivity per person employed).

S: Labour Market Monitor 2023.

What characterises the countries of the top field?

- **High economic performance:** Most of the top countries have a **(very) high real GDP per capita** (EU 27 28,950 €) with **above-average labour productivity per employee**. Estonia, Lithuania and Malta have below-average real GDP per capita (and below-average labour productivity per person employed) but above-average GDP per capita dynamics.
- The top countries are characterised by **an above-average employment rate** (EU 27 69.8%) and a **below-average unemployment rate** (EU 27 6.3%) as well as an **above-average employment growth rate** (EU 27 +2.0%).

Development of the EU 27 countries in Dimension 1 since 2008

- The **financial and economic crisis** of 2009 and the COVID-19 pandemic of 2020 have left clear traces: The **labour market performance of the EU 27 countries** has **diverged** in recent years based on the seven indicators of Dimension 1 (**economic divergence within the EU 27 countries**).
- The **country differences in performance** (range of scores) **were greatest** in **2021 and 2022**. The large differences are mainly due to Ireland at the upper end of the distribution. However, in 2022 **the countries perform better on average** than in 2008 (index point minimum in 2022 is higher than in 2008, all quartile limits are higher in 2022 than in 2008).
- Most of the **EU 27 countries** were able to **recover** from the financial and economic crisis **by the outbreak of the COVID-19 pandemic**. However, the **speed of economic and labour market recovery** after the financial and economic crisis **varies**.
- The **COVID-19** pandemic has again **worsened the performance in all countries**, but only briefly and to a lesser extent than the financial and economic crisis of 2009.

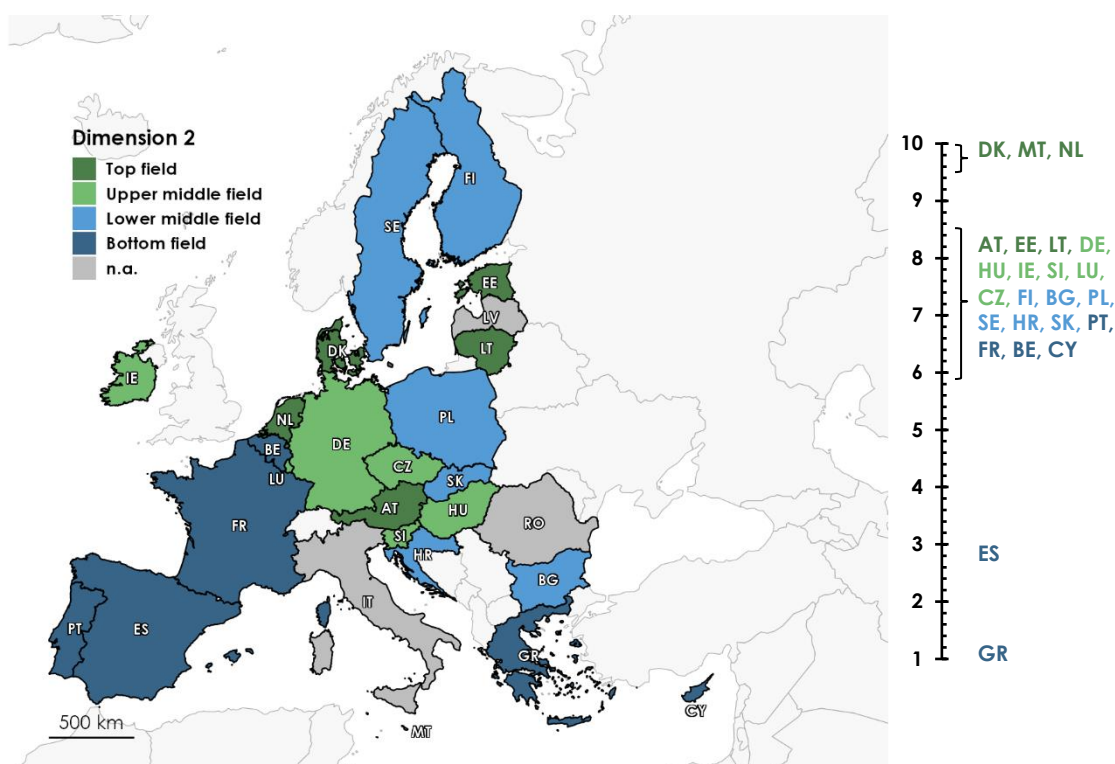

Development of the index point values of the EU 27 countries in Dimension 1

S: Labour Market Monitor 2023. – Range of index point values. Reading example: The box plot diagram visualises the spread and position of the countries' scores per year. The boxes (green and blue areas) contain the middle 50% of the countries, i. e. the upper and lower middle field. They are bordered by the upper and lower quartiles; the transition from the green to the blue area represents the median: 50% of the countries are less than or equal to this value. The edges of the box plot mark the country with the lowest and highest score per year or the country with the worst and best rank per year. For exact index point values and ranks see Table 12 and Table 13 in the appendix. – To compare the index point values over time, the index point values were normalised on the basis of a global minimum and maximum, i. e. the lowest and highest values for each indicator in the period 2008 to 2022 were sought and used for normalisation (min-max method).

Dimension 2 "Participation"

Dimension 2, "Participation", captures the extent to which the labour market and employment system are able to integrate different groups of people. This year, it includes twelve indicators instead of 13 (for more information see chapter "The five dimensions"): Indicators on employment (employment rates of different age groups, gender gap in employment, involuntary part-time employment, involuntary temporary employment), indicators on the structure of unemployment (unemployment rate of young and older people, long-term unemployment rate and long-term unemployment rate of older people) and indicators on expenditure on active labour market policies (including short-time work).

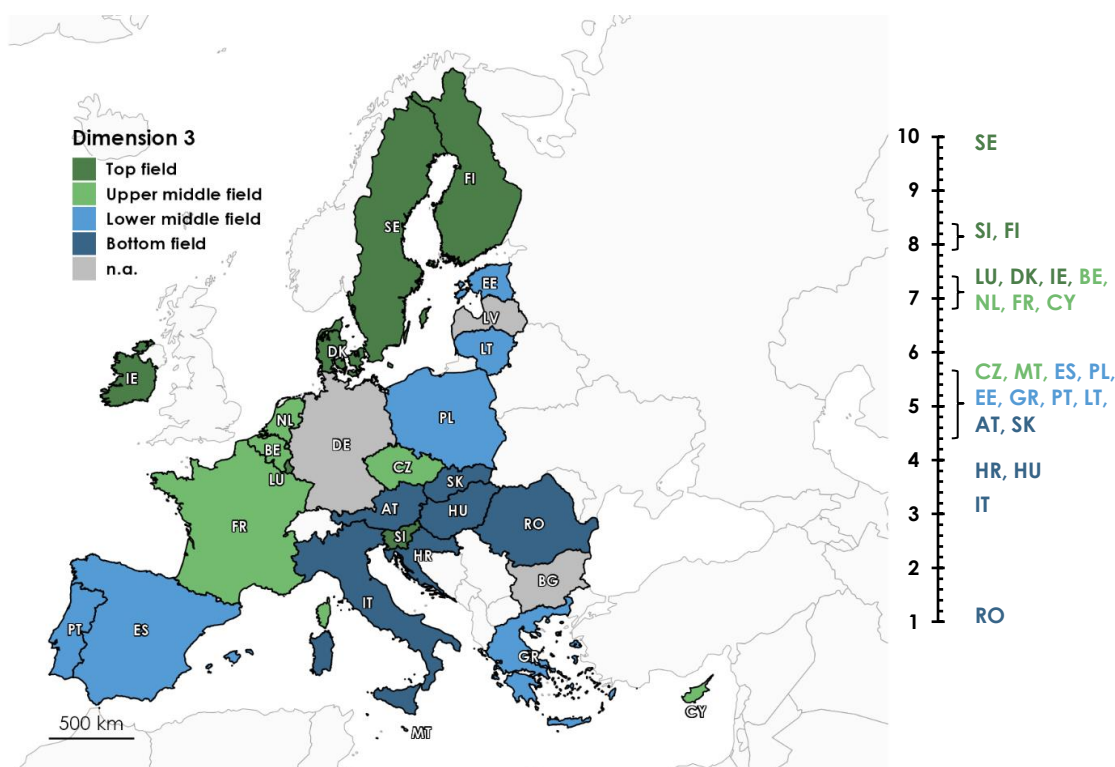

S: Labour Market Monitor 2023. – Index calculation without IT, LV, RO. – n.a. ... not available.

What characterises the countries of the top field?

- The top countries have in common an **above-average employment rate** for the prime working age group (25 to 44 years, EU 27 81.4%) and a **below-average share of involuntary temporary employment** (EU 27 4.4%).
- Most of the countries in the top field are characterised by **below-average youth unemployment rates** (EU 27 14.5%) and **long-term unemployment rates** (EU 27 38.7%).
- The majority of the countries in the top field **invest heavily in active labour market policies**.

Dimension 3 "Exclusion Risks on the Labour Market"

Dimension 3 deals with the main determinants of labour market opportunities and comprises 20 indicators on aspects of education, exclusion, health, and childcare: The education dimension includes seven indicators reflecting the level of education and participation in further education of the population. The exclusion dimension includes two indicators reflecting individual care responsibilities and one indicator of the inactivity rate. The childcare dimension measures the extent to which a country provides childcare infrastructure. Eight indicators in the health dimension reflect the health status of the (working age) population.

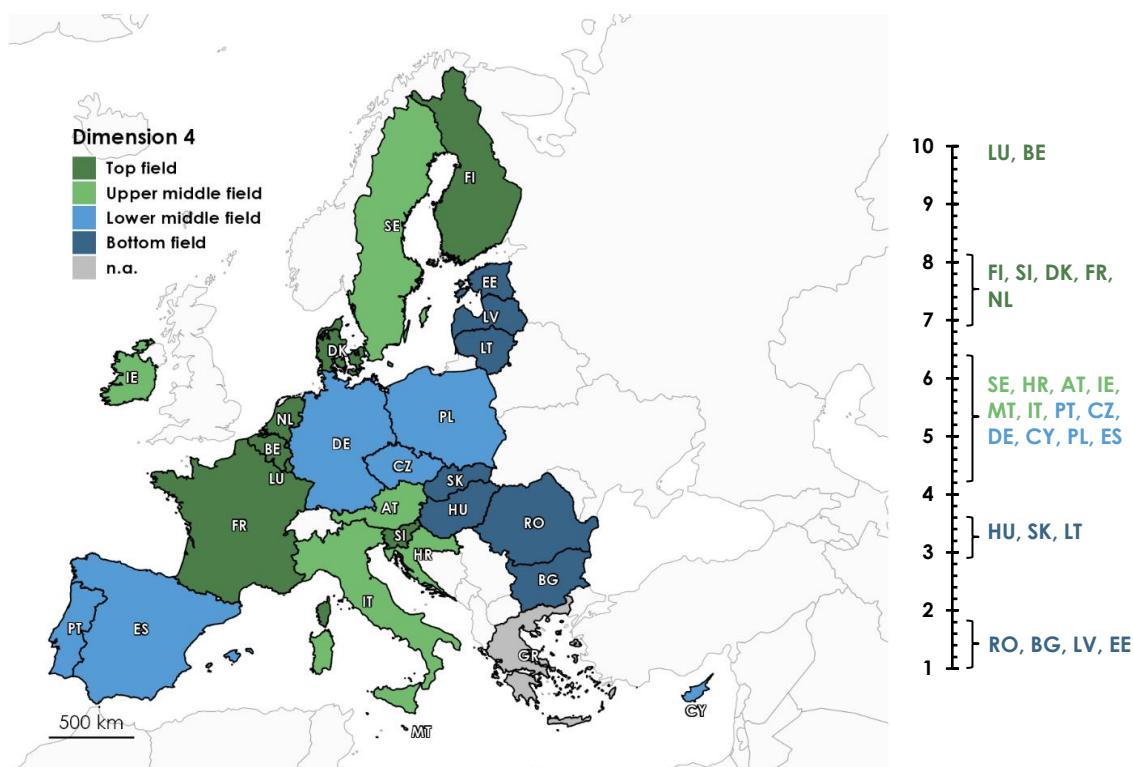

S: Labour Market Monitor 2023. – Index calculation without BG, DE, LV. – n.a. ... not available.

What characterises the countries of the top field?

- The **share of the population with tertiary education** (EU 27: 34.3% of 25- to 64-year-olds) and **participation in lifelong learning** (EU 27 11.9%) are **above average**.
- The **rate of childcare** for under-3-year-olds with a minimum of 30 hours per week is **above average** in almost all top countries (EU 27 22.6%).
- The **number of healthy life years expected at the age of 65** (EU 27 9.9 years for women and 9.5 years for men) is **above average** in most of the top countries.

Dimension 4 "Distribution of Earnings"

Dimension 4 deals with the level and distribution of income. Eight indicators are included in the assessment: the average level of earnings, the functional and personal distribution of primary income (compensation of employees as a percentage of GDP and income distribution quintiles as a measure of inequality in income distribution), the share of tax revenue from labour, the proportion of the low-wage earners (based on gross hourly earnings) as well as the share of "working poor" and the gender pay gap.

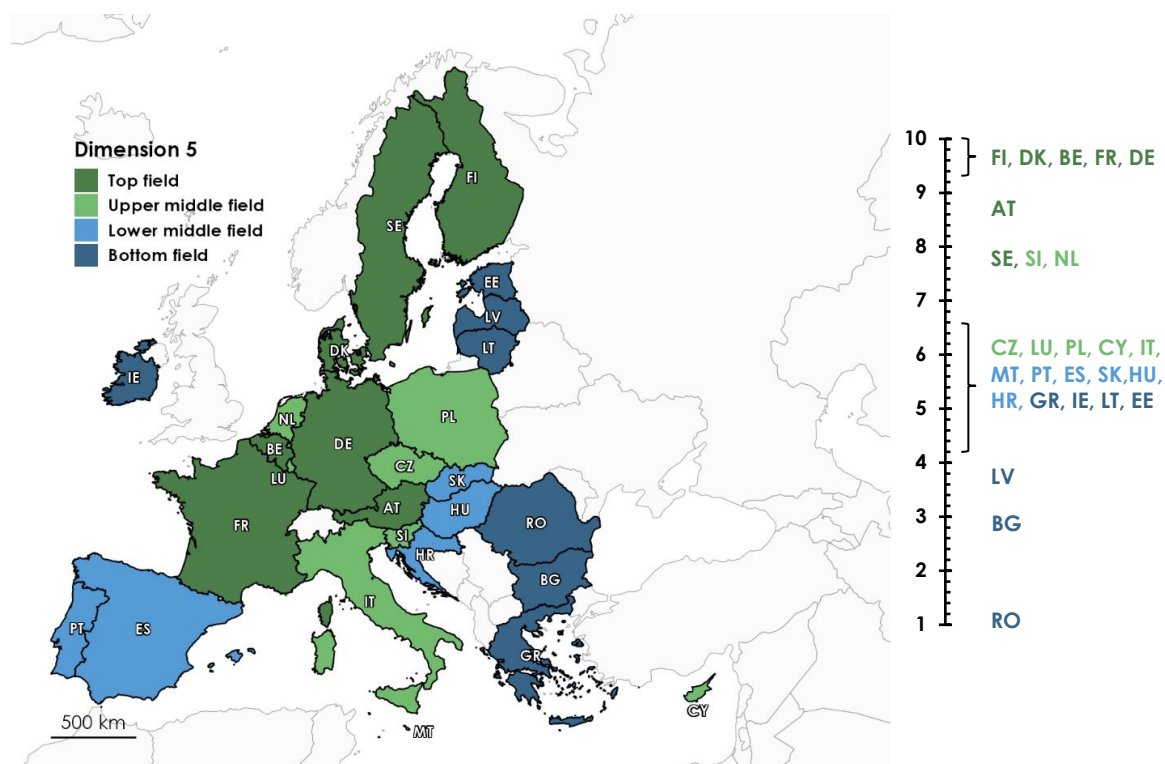

S: Labour Market Monitor 2023. – Index calculation without GR. – n.a. ... not available.

What characterises the countries of the top field?

- The countries of the top field have an **above-average share of compensation of employees in GDP** (EU 27 46.8%) and **below-average income inequality** (income quintile ratio, EU 27 5.7).
- Most of the countries have **above-average incomes**: All countries in the top field have above-average nominal compensation per employee in purchasing power standards (EU 27 32,332 PPS). Six out of the seven countries in the top field have above-average compensation of employees in purchasing power standards (EU 27 40,633 PPS).

Dimension 5 "Redistribution by the Welfare State"

Dimension 5 focuses on social welfare and levels of transfer in the EU countries. The index encompasses a total of ten indicators: six indicators on the extent and structure of social protection benefits by various functions (sickness/health care, old age, family/children, unemployment, disability, survivors/social exclusion/housing), one indicator on educational expenditure as a percentage of GDP, and three indicators on the risk of poverty.

S: Labour Market Monitor 2023.

What characterises the countries of the top field?

- In line with the conception of this index, most of the top countries spend an **above-average share of GDP on social benefits** (EU 27 28.7%).
- In all the top countries, the **at-risk-of-poverty rate** (after social transfers) is **below the EU average** (EU 27 16.5%) and **social transfers** make an **above-average contribution to reducing the at-risk-of-poverty rate** (EU 27 8.9 percentage points). With the exception of Austria, the **gap between the median income of those at risk of poverty and the at-risk-of-poverty threshold** is **below average** (EU 27 23.1%).
- Most of the countries of the top field (with the exception of Germany) have **above-average expenditure on education** as a percentage of GDP (EU 27 4.7%).

Table appendix

In the following tables, both the raw data and the results of the Labour Market Monitor 2023 are presented in tabular form in the form of rankings. At the request of experts from the Vienna Chamber of Labour, some indicators were included in the raw data on a gender-specific basis, i.e. separately for men and women. However, these are only included as "total" in the calculation of the respective dimensions.

With a few exceptions, the calculation of the dimensions is based on the years 2022 and 2021; deviations are indicated.

Countries with the same index points have the same rank. Coloured markings indicate these cases.

The raw data is presented for all EU 27 member states. However, due to a lack of data, not all EU 27 member states could be included in the calculation for three out of five dimensions. Where available, the raw data is also shown for the EU 27 aggregate.
